

BIG WAVE

Advanced Burning Control

The Big Wave torch is the first really differentiating novelty on the market in this century.

Big Wave is the the worlds first garden torch using the “Advanced Burning Control” technology from Pipe-Line Denmarks patent pending combustion chamber.

From the Big Wave torch you experience a fantastic and unique bon fire in your garden, which with a simple click of a lighter, creates ambience and an all year round eye catcher.

With the “ABC” technology, the oil gasses are burned which allows a very clean and minimum smoking torch without the hazard of flying embers and sparks.

Big Wave is also equipped with a click lock for extra safety if the torch falls over. The fire is easily extinguished with the snuffer which also keeps the durable fibreglass wick dry and ready for use in all weather conditions!

SPECIFICATIONS
